

Problem and Pain Points

Consumers with multiple Visa cards issued by different banks struggle to track budgets and spending. They often rely on spreadsheets (very clunky on mobile) or have to juggle multiple bank apps. Financial jargon further creates barriers for everyday users, including students, who want simple, clear insights.

Goal

Provide a mobile dashboard for Visa cardholders that consolidates transactions across cards and delivers weekly budget tracking in easy to understand terms.

Target Users

- Students and young professionals budgeting weekly.
- Busy consumers managing multiple Visa credit/debit cards.
- People new to personal finance who want clarity and simplicity

MVP Scope

- Weekly Cap Setting (enter spending cap, see remaining budget).
- Add Transactions (manual entry for demo; real integration later).
- Category Breakdown (top 3 on Home, full list on Categories screen).
- Insights Page (simple weekly insights, no jargon).

Success Metrics/KPIs

- Activation: % of users who set a weekly cap.
- Engagement: Weekly active users; sessions per week.
- Outcome: % of users staying within cap each week.

Roadmap (Next Steps)

- Auto-categorization of transactions.
- Open-banking aggregator integration (Plaid, Tink).
- Real-time fraud alerts and “Freeze card” feature.
- Rewards/streaks for staying under cap.

Risks

- Real bank data integration depends on partnerships.
- Privacy & compliance requirements (PCI/PII).
- Accuracy of transaction categorization.
